General Chairs

Andrea Valle – Università di Torino
Marco Masoero – Politecnico di Torino
Stefano Bassanese – Conservatorio di Torino
Simone Spagnol – Aalborg University Copenhagen

Scientific Chairs

Simone Spagnol – Aalborg University Copenhagen
Charalampos Saitis – Queen Mary University of London

Scientific Committee

Federico Avanzini – University of Milano
Stefan Bilbao – University of Edinburgh
Jean Bresson – Ableton, Berlin
Emma Frid – Royal Institute of Technology Stockholm
Anastasia Georgaki – National and Kapodistrian University of Athens
Lauren Hayes – Arizona State University
Vincenzo Lombardo – University of Torino
Georgios Marentakis – Østfold University College
Andrew McPherson – Queen Mary University London
Romain Michon – GRAME-CNCM and CCRMA, Stanford University
Laurel Pardue – Queen's University Belfast
Sandra Pauletto – Royal Institute of Technology Stockholm
Gary Scavone – McGill University
Stefania Serafin – Aalborg University Copenhagen
Louena Shtrepi – Politecnico di Torino
Rebecca Stewart – Imperial College London
Hiroko Terasawa – University of Tsukuba
Sølvi Ystad – PRISM - CNRS, Marseille

Panel of Scientific Reviewers

Ali Adjorlu, Andrea Agostini, Mitsuko Aramaki, Jack Armitage, Adriano Baratè, Roberto Barumerli, Edgar Berdahl, Laura Bishop, Roberto Bresin, Fabian Brinkmann, Nick Bryan-Kinns, Grigore Burloiu, Emilios Cambouropoulos, F. Amílcar Cardoso, Rafael Caro Repetto, Thibaut Carpentier, Nicolas Castagné, Doga Cavdir, Chris Chafe, Vasileios Chatziioannou, Axel Chemla-Romeu-Santos, Emmanouil Theofanis Chourdakis, Regina Collecchia, Nick Collins, Isabella Czedik-Eysenberg, Stefano D'Angelo, Sofia Dahl, Orchisama Das, Matthew Davies, Stefano Delle Monache, Carlo Drioli, Christos Drouzas, Michele Ducceschi, Cumhuri Erkut, Fabian Esqueda, Georg Essl, Federico Fontana, Martin Gasser, Sergio Giraldo, Aggelos Gkiokas, Werner Goebel, Maarten Grachten, Francesco Grani, Pierre Hanna, Kjetil Falkenberg Hansen, Andrew Horner, Daniel Hug, Alexander Refsum Jensenius, Pierre Jouvelot, Hanna Järveläinen, Haruhiro Katayose, Peter Knees, Alexandros Kontogeorgakopoulos, Otso Lähdeoja, Olivier Lartillot, Sven-Amin Lembke, James Leonard, Giacomo Lepri, Luca Andrea Ludovico, Athanasios Lykartsis, Vangelis Lympouridis, Marcella Mandanici, Luca Marinelli, Jeremy Marozeau, Benjamin Matuszewski, Davide Andrea Mauro, Riccardo Miccini, Nicolas Misdariis, Thomas Mitchell, Dave Moffat, Fabio Morreale, Juhan Nam, Niels Christian Nilsson, Hiroki Nishino, Markus Noisternig, Stavros Ntalampiras, Razvan Paisa, Rui Pedro Paiva, Claudio Panariello, Stefano Papetti, Julian Parker, Johan Pauwels, Finnur Pind, Pedro J. Ponce De León, Giorgio Presti, Niccolò Pretto, Gerard Roma, David Roze, Diemo Schwarz, Rod Selfridge, Kai Siedenburg, Federico Simonetta, Diana Siwiak, Julius Smith, Tony Stockman, Dan Stowell, Bob Sturm, Tapio Takala, Burak Tamer, Erica Tavazzi, Sten Ternström, Shawn Trail, Luca Turchet, Vesa Välimäki, Isabelle Viaud-Delmon, Domenico Vicinanza, Jerome Villeneuve, Stefan Weinzierl, Silvin Willemsen, Asterios Zacharakis

Table of Contents

Simone Spagnol and Andrea Valle viii Preface

KEYNOTES

Anna Xambó xii Collaborative/Participatory Music Experiences: A Dialogue Between SMC and HCI

Marek Chołoniowski xiii Sound Space Kinetics

Pierre Alexandre Tremblay xiv Beautiful Mess: tales of in-between-ness in SMC research

ORAL SESSION 1 - ANNIVERSARIES

Davide Andrea Mauro, Federico Avanzini, Adriano Baratè, Luca Andrea Ludovico, Stavros Ntalampiras, Smilen Dimitrov and Stefania Serafin 3 Sixteen years of Sound and Music Computing: A look into the history and trends of the Conference and Community

Daniele Ghisi and Andrea Agostini 11 A compendium of bach's shortcomings as it turns ten (along with a few ideas on how to overcome them)

Jonathan Bell 18 Improvements in bach 0.8.1, a user's perspective

ORAL SESSION 2 - HARDWARE AND SOFTWARE FOR SMC

Hans Lindetorp and Kjetil Falkenberg 25 WebAudioXML: Proposing a new standard for structuring web audio

Shin Kato, Tomohiro Ikeda, Mitsuaki Kawamorita, Manabu Tsukada and Hiroshi Esaki 32 Web360²: An interactive web application for viewing 3D audio-visual contents

Federico Simonetta, Stavros Ntalampiras and Federico Avanzini 40 ASMD: An automatic framework for compiling multimodal datasets with audio and scores

Laura Bishop and Alexander Refsum Jensenius 47 Reliability of two IR motion capture systems in a music performance setting

POSTER SESSION 1

Davor B. Vincze, Hrvoje Hiršl and Jonathan S. Abel 54 Strune - An interactive audio-visual installation inspired by string theory

Roberto Bresin, Sandra Pauletto, Jarmo Laaksolahti and Erik Gandini 62 Looking for the soundscape of the future: preliminary results applying the design fiction method

Emma Frid and Hans Lindetorp 68 Haptic music - Exploring whole-body vibrations and tactile sound for a multisensory music installation

Romain Michon, Daniel Overholt, Stéphane Letz, Yann Orlarey, Dominique Foer and Catinca Dumitrascu 76 A Faust architecture for the ESP32 microcontroller

Alexandros Kontogeorgakopoulos and Odysseas Klissouras 82 01101110: An audiovisual installation based on the Cellular Automaton Rule 110

Guilherme Jun Yoshimura, Marcelo Queiroz, Haydée Fiszbein Wertzner and Danira Francisco 88 Speech sound disorder classification based on time-aligned dissimilarity profiles

Nicolas Figueiredo and Marcelo Queiroz 94 Detection of musically relevant regions in multiresolution time-frequency representations evaluated on piano recordings

Doga Cavdir 102 Embedding electronics in additive manufacturing for digital musical instrument design

Nolan Lem 110 Menagerie: exploring the audio-visual rhythms of violence through data, gun triggers, and swarms

- Olivier Lartillot, Carlos Cancino-Chacón and Charles Brazier 115 Real-time visualisation of fugue played by a string quartet
- Georgios Varoutsos 123 Peace Wall Belfast: Spatial audio representation of Divided Spaces and soundwalks

ORAL SESSION 3 - SOUND IN SPACE

- Marius George Onofrei, Riccardo Miccini, Runar Unnthorsson, Stefania Serafin and Simone Spagnol 131 3D ear shape as an estimator of HRTF notch frequency
- Eoin F. Callery and Elliot K. Canfield-Dafilou 138 Methods for performing with feedback in virtual acoustics
- Karolina Prawda, Sebastian J. Schlecht and Vesa Välimäki 145 Evaluation of reverberation time models with variable acoustics

ORAL SESSION 4 - PHYSICAL MODELLING I / ANALYSIS AND SYNTHESIS

- Rares Stefan Alecu, Stefania Serafin, Silvin Willemsen, Emanuele Parravicini and Stefano Lucato 153 Embouchure interaction model for brass instruments
- Silvin Willemsen, Stefania Serafin, Stefan Bilbao and Michele Ducceschi 161 Real-time implementation of a physical model of the tromba marina
- Dmitri Kartofelev, Joann Gustav Arro and Vesa Välimäki 169 Insights into the string-barrier interaction dynamics based on high-speed camera measurements

ORAL SESSION 5 - MODELLING PERFORMANCE

- Çağrı Erdem, Qichao Lan, Julian Fuhrer, Charles Martin, Jim Tørresen and Alexander Refsum Jensenius 177 Towards playing in the 'air': Modeling motion-sound energy relationships in electric guitar performance using deep neural networks
- Yudong Zhao, György Fazekas and Mark Sandler 185 Identifying master violinists using note-level audio features
- Luca Marinelli, Athanasios Lykartsis, Charalampos Saitis and Stefan Weinzierl 193 Musical dynamics classification with CNN and modulation spectra

POSTER SESSION 2

- Daniel Mayer 200 Fb1 - An interface for single sample feedback and feedforward in SuperCollider
- Nicolas Castagné and Annie Luciani 204 The Physics Network Scripting Language to design masses-interactions physical models for arts
- Giacomo Lepri 212 Sonification as negotiation - Learning from translation studies
- Rasmus Kjørbo, Ramon Romeu, Marco González Pérez, Francisco Rosado Correia, Vatsal Guruvayurappan, Daniel Overholt and Sofia Dahl 220 Rhythm Rangers: An evaluation of beat synchronisation skills and musical confidence through multiplayer gamification influence
- Asterios Zacharakis, Stamatia Kalaitzidou, Maximos Kaliakatsos-Papakostas and Emilios Cambouropoulos 228 Good artists copy, great artists steal: Strategies for creative exploitation of the CHAMELEON harmonisation assistant
- James Leonard and Jerome Villeneuve 234 Design and implementation of real-time physically-based virtual musical instruments: A balancing act
- Yuri De Pra, Federico Fontana, Stefano Papetti and Michele Simonato 242 A low-cost endless knob controller with programmable resistive force feedback for multimedia production
- Karolina Prawda, Stefania Serafin and Vesa Välimäki 247 Evaluation of accurate artificial reverberation algorithm
- Matteo Amadio and Alberto Novello 255 Digitally enhanced drums: An approach to rhythmic improvisation
- Matteo Marson and Andrea Agostini 260 ET systems: A high-level approach to additive synthesis control

ORAL SESSION 6 - SONIC INTERACTION DESIGN

- Georgios Marentakis 268 Pictorize: Transforming image region luminosity to sound brightness for monitoring location
- Marco Tiraboschi, Federico Avanzini and Stavros Ntalampiras 276 Spectral analysis for modal parameters linear estimate
- Argan Verrier, Vincent Goudard, Elim Hong and Hugues Genevois 284 Interactive software for the sonification of neuronal activity

ORAL SESSION 7 - PHYSICAL MODELLING II / AUDIO-HAPTIC INTERACTION

- Silvin Willemsen, Anca-Simona Horvath and Mauro Nascimben 292 DigiDrum - A haptic-based virtual reality musical instrument and a case study
- Silvin Willemsen, Razvan Paisa and Stefania Serafin 300 Resurrecting the tromba marina: A bowed virtual reality instrument using haptic feedback and accurate physical modelling
- Claude Cadoz 308 GENESIS 4th generation / Nomadcity / Gesture emulation: Real-time CORDIS-ANIMA physical modeling and high performance force-feedback interaction within the Hélicanthe workstation

ORAL SESSION 8 - MUSIC ANALYSIS AND RETRIEVAL

- Hiroyuki Yamamoto, Yui Uehara and Satoshi Tojo 316 Jazz harmony analysis with epsilon-transition and cadential shortcut
- Laurent Feisthauer, Louis Bigo, Mathieu Giraud and Florence Levé 323 Estimating keys and modulations in musical pieces
- Minz Won, Andres Ferraro, Dmitry Bogdanov and Xavier Serra 331 Evaluation of CNN-based automatic music tagging models

POSTER SESSION 3

- Masatoshi Hamanaka, Yui Isono, Keiji Hirata and Satoshi Tojo 338 Web-based time-span tree editor and analysis database
- Tsubasa Tanaka 344 Motif set assignment problem in the compositional process of "Musical Rally"
- Yuta Ogura, Hidefumi Ohmura, Yui Uehara, Satoshi Tojo and Kouichi Katsurada 350 Expectation-based parsing for jazz chord sequences
- Giovanni Santini 357 Composition as an embodied act: A framework for the gesture-based creation of augmented reality action scores
- Juan Alonso Moreno, Francesco Bigoni and Georgios Palamas 364 Latent birds: A bird's-eye view exploration of the latent space
- Charles Brazier and Gerhard Widmer 371 Towards reliable real-time opera tracking: Combining alignment with audio event detectors to increase robustness
- Simon Borst Tyroll, Daniel Overholt and Georgios Palamas 378 AVAI: A tool for expressive music visualization based on autoencoders and constant Q transformation
- Beate Ruth Kutschke and Tobias Bachmann 386 Historiography of the form of symbolic music through a computer-assisted analysis
- Niccolò Pretto, Alessandro Russo, Federica Bressan, Valentina Burini, Antonio Rodà and Sergio Canazza 394 Active preservation of analogue audio documents: A summary of the last seven years of digitization at CSC
- Oliver Bown, Angelo Fraietta, Sam Ferguson and Deborah Turnbull Tillman 399 Rapid composition for a multi-device networked music platform
- Alexander Carôt, Mischa Dohler, Simon Saunders, Frank Sardis, Richard Cornock and Navdeep Uniyal 407 The world's first interactive 5G music concert: Professional quality networked music over a commodity network infrastructure

ORAL SESSION 9 - EMOTIONS AND PERCEPTION

- Sven-Amin Lembke 413 Matching uni-directional auditory gestures to visual trajectories of varying curvature
- Malcolm Houel, Abhilash Arun, Alfred Berg, Alessandro Iop, Adrián Barahona-Ríos and Sandra Pauletto 419 Perception of emotions in knocking sounds: An evaluation study
- Rumi Hiraga and Kjetil Falkenberg 426 Computer-based music training with hearing impairments: Lessons from an experiment
- Adrian B. Latupeirissa, Claudio Panariello and Roberto Bresin 434 Exploring emotion perception in sonic HRI

ORAL SESSION 10 - DIGITAL AUDIO EFFECTS

- Giovanni Capizzi, Davide Rocchesso and Stefano Baldan 442 Streams as Seams: Carving trajectories out of the time-frequency matrix
- Adrián Barahona-Ríos and Sandra Pauletto 450 Synthesising knocking sound effects using conditional WaveGAN
- Leonardo Fierro and Vesa Välimäki 457 Towards objective evaluation of audio time-scale modification methods

Preface

The Sound and Music Computing Conference reaches its 17th edition!

This 17th Sound and Music Computing Conference (SMC 2020) is organized by three institutions from Torino, Italy: University, Polytechnic School and Conservatorio di Musica “G. Verdi”. The conference should have taken place in Torino, June 24th – 26th, 2020 as a joint event together with the XXIII Colloquium of Music Informatics (CIM) organized by the Italian Association of Music Informatics (AIMI).

The current COVID-19 situation has forced us to change our plans for this edition. While in agreement with AIMI we decided to postpone the XXIII CIM, together with the SMC steering committee we opted for turning SMC 2020 into a virtual conference. Although this means a certain loss of opportunities in relation to the physical conference, this decision allowed us to keep the yearly scheduling of the SMC conference.

Did we learn anything from COVID-19? In terms of scientific practice, we have all been forced to embrace on-line work. At least we became more acquainted and competent with this kind of resources. While moving the SMC conference to the World Wide Web, we thought that we should try to exploit some possibilities provided by this technological shift. For instance, why keep access to the conference reserved to a closed group of registered participants? Thus, this 2020 edition is open to anyone with an internet connection.

SMC 2020 Topics of Interest include a wide selection of topics related to acoustics, psychoacoustics, technologies for audio and music, audio analysis and synthesis, spatial sound, sonic interaction design, music analysis, performance modelling, and many more. SMC 2020 is an interdisciplinary forum to share music, thoughts, needs and discoveries in this remarkable research topic that brings together art, technology and human perception.

SMC 2020 welcomed two types of contributions:

- Scientific contributions examining all the core topics of the Sound and Music Computing field; these contributions, that have been fully peer-reviewed, are presented as oral talks or posters.
- Music contributions that make use of the possibilities technology offers nowadays to create music in a broad sense.

SMC 2020 received 233 submissions: 97 scientific contributions and 136 musical contributions. Out of them, SMC 2019 features 32 oral presentations, 32 posters, and 26 musical pieces.

SMC 2020 had the help of 110 scientific reviewers to examine all the submissions in order to compile the final Scientific Program. Based on recommendations from the Scientific Committee, the Scientific Chairs have made the final decisions and organized the presentation of the different contributions in the Oral and Poster Sessions.

On the other hand, since the music pieces submitted to the conference were mostly meant for live concerts, we opted for postponing the music review process to the next

edition. For this edition, we decided - in agreement with composers - to deliver part of the submitted fixed-media acoustic works only.

We tried to devise a way to ensure a certain content robustness while still providing a certain degree of interactivity. This edition features both recorded video presentations of the works and live Q&A video chat sessions. Poster presentations are in the form of Skype sessions open to anyone.

In this book you can find the Proceedings of SMC 2020 with all the scientific contributions presented during the conference.

Torino, June 2020
Simone Spagnol and Andrea Valle
on behalf of the SMC 2020 General & Scientific Chairs

Keynotes

Keynote 1

Anna Xambó

Collaborative/Participatory Music Experiences: A Dialogue Between SMC and HCI

Music has been a topic of inspiration in Human-Computer Interaction (HCI) since its beginning in the 1970s–1980s. SMC has borrowed HCI methods and theories as part of its agenda since its inception. In this keynote presentation, I will reflect on how HCI has inspired my SMC work, focusing on the creation of new collaborative and participatory experiences for music performance. I will present several projects that showcase different interaction approaches to digital musical instrument design: tangible, mobile, wearable, and laptop-based interactions. In turn, I will discuss the implications for the two fields.

Looking forward, we will see how both fields are evolving rapidly and adapting to new socio-technical changes, such as the control of AI, the ubiquitous digital interfaces, and the worldwide hyper-connectivity, to name a few. I will consider how these transformations are shaping new music experiences for collaboration and participation, as well as the potential synergies with HCI perspectives that incorporate ideas from feminism, decolonisation, and sustainability, among others.

About the speaker: Anna Xambó is a Senior Lecturer in Music and Audio Technology at De Montfort University and an experimental electronic music producer. She studied HCI and music technology at Universitat Pompeu Fabra (Barcelona, Spain), and completed her PhD in computer-supported collaboration on interactive tabletops for music performance at The Open University (Milton Keynes, UK). Her passion for sound and music computing kept being nurtured as a postdoctoral fellow at the Center for Music Technology and Digital Media Program at Georgia Tech (Atlanta, GA, USA), postdoctoral research assistant at the Centre for Digital Music, Queen Mary University of London (UK), and Associate Professor in Music Technology at the Norwegian University of Science and Technology (Trondheim, Norway). Her research and practice focus on new interfaces for music performance looking at live coding, collaborative and participatory music systems, and multichannel spatialisation. She has also a special interest in improving the representation of women in music technology, with leading roles in two organisations: WoNoMute (2018-2019, NTNU/UiO) and Women in Music Tech (2016-2017, Georgia Tech).

Keynote 2

Marek Chołoniowski
Sound Space Kinetics

Sound space kinetics presents different forms of sound movement in close and open space. There is a concept of meta instrument, an invisible resonating 3D object with all active and passive elements inside. Exploring selected examples of historical and current sound art projects establishes a specific link between music and other forms of art based on sound.

About the speaker: Marek Chołoniowski. Composer, sound artist, performer, teacher and manager. Head of Electroacoustic Music Studios at the Academy of Music in Krakow and Audiosphere Lab at Intermedia Department of Fine Arts Academy in Kraków. Founder and President of Muzyka Centrum Art Society and Polish Society for Electroacoustic Music PSeME. Since 2011 President of International Confederation of Electroacoustic Music CIME/ICEM. Director of Audio Art Festival in Krakow. Founder of many groups and ensembles, among others: Freight Train, ch&k&k, dizzy kinetics, GrupLab. Author of many projects, instrumental and electroacoustic music, sound and video installations, interactive, space/environment, audiovisual and net-art projects. He received Honorable Award of the Polish Composers Union, Award of the Ministry of Culture and National Heritage, as well as the Independent Project grant of the CEC ArtsLink in New York.

www.studiomch.art.pl

Keynote 3

Pierre Alexandre Tremblay

Beautiful Mess: tales of in-between-ness in SMC research

In this presentation, Pierre Alexandre Tremblay will share his experience of musiking with technology, embracing the richness and plurality of approaches to research in Sound and Music Computing.

Part reflective journal, part love song, part recipe book, this talk will offer the perspective from Tremblay's music practice research, with examples from early ideas to his current projects. Artists will be cast as agents of chaos, and a model will be proposed where they contribute actively to many other well-established disciplines, between and beyond their respective areas.

SMC research sits intrinsically at the crossings of studio music production, (psycho) acoustics, sound design, DSP, data science, but tales of its practice show a rich world beyond such schematised inter-disciplinary accounts. Therefore, Pierre Alexandre will argue that this in-between-space in itself is worth both defending and celebrating. Reflecting on the affordances and challenges of such approach, he will hope to encourage us to be brave and embrace the fertility of crosspollination and uncertainties of this beautiful mess.

About the speaker: Pierre Alexandre Tremblay (Montréal, 1975) is a composer and an improviser on bass guitar and sound processing devices, in solo and within various ensembles. He is a member of the London-based collective Loop, and his music is also released on Empreintes DIGITALes and Ora.

He formally studied composition with Michel Tétrault, Marcelle Deschênes, and Jonty Harrison, bass guitar with Jean-Guy Larin, Sylvain Bolduc, and Michel Donato, analysis with Michel Longtin and Stéphane Roy, studio technique with Francis Dhomont, Robert Normandeau, and Jean Piché.

Pierre Alexandre is Professor in Composition and Improvisation at the University of Huddersfield (UK), where he anchored the Fluid Corpus Manipulation project. He previously worked in popular music as producer and bassist, and has a keen interest for creative coding. He enjoys spending time with his family, drinking oolong tea, gazing at dictionaries, reading prose, and taking long walks.
